

We can mutually draw a conclusion that Ecological Creativity is highly beneficial to majority of the population as it promotes eco-friendly technology from the conducted survey. People in the category of Young Adults contribute the most in making the society Ecologically Creative. The majority of the population believes that Ecological Creativity will help in making the future brighter. It will also ensure that Pollution, Deforestation and Usage of Single Use Non Bio-degradable Plastic is minimized. If given the required attention and effort, this can be made true in the next ten years. We can also infer a relationship between Ecological Creativity and Sustainable Development.
